

LOCATION

Uzhhorod, Ukraine · Remote
Time zone UTC+2 (EET)

CORE STACK

AUTOMATION

n8n · Make · Zapier · Webhooks · REST APIs · JSON · CRM integrations · HubSpot · Pipedrive · Google Sheets

AI & AGENTS

Claude API · **OpenAI API** · Ollama · MCP · Structured output · Prompt engineering · Human-in-the-loop · Claude Code

DATA & INFRA

PostgreSQL / SQL · Node.js · Python (scripting) · Docker · PowerShell · bash · Grafana · Power BI · Cloudflare · Ansible

PLUS: FRONTEND

TypeScript · React · Next.js · Storyblok

LANGUAGES

Ukrainian, Russian — Native
English — B2+ (Upper-Intermediate)
German — B2 (Upper-Intermediate)

EDUCATION

Uzhhorod National University
Physics · 2011 – 2014

Kostyantyn Karimov

AI Automation & Agents Engineer

n8n · LLM pipelines · AI voice agents ↔ CRM integrations · frontend: React / Next.js

kostyantyn.karimov@gmail.com · linkedin.com/in/kostyantyn-karimov-2a234b1a3 · github.com/kostyantyn94

PROFILE

I automate business processes end to end: CRMs, email, calendars, voice agents and LLMs wired together with n8n and REST APIs, and kept running in production. At Callers.ai I integrate AI voice agents with HubSpot, Pipedrive and custom CRMs through REST APIs, n8n and Zapier. My pipelines are built to be cheap and safe to run: rules first and the model only where needed (67–82% of decisions without an LLM call in my projects), validation of every AI answer, retries and error handling, a human for the doubtful cases, an audit trail for every decision. Support background: I debug calmly and explain trade-offs to non-technical people.

EXPERIENCE

Integrations & AI Voice Agents Engineer · Callers.ai

Aug 2025 – Present · Remote

n8n · Zapier · REST APIs · HubSpot · Pipedrive · SQL · Grafana · Next.js

- Integrate AI voice agents with HubSpot, Pipedrive and customers' custom CRMs via REST APIs: fetching, creating and updating leads.
- Build and maintain n8n and Zapier workflows for the company's integrations and internal automation.
- Build, test and monitor integrations with Zoom, Slack, calendars and CRMs.
- Troubleshoot client issues with SQL queries and Grafana logs; build BI dashboards, reports, internal mini-apps and automation scripts in JavaScript.
- Maintain the company's frontend on Next.js + Storyblok (headless CMS).

AI & AUTOMATION PROJECTS

SWInv: Software Inventory with AI Classification

Sep 2026

github.com/kostyantyn94/swinv · n8n · PostgreSQL 16 · Ollama · qwen2.5:14b · JSON Schema · Python · JavaScript · PowerShell / bash

- Solves: software inventory and policy compliance (prohibited / restricted products) across Windows and Linux/macOS fleets, fully on-prem; a local LLM classifies only what dictionaries and rules cannot.
- How: collectors → n8n webhook → PostgreSQL; rules stored as data; LLM output validated against a JSON Schema with confidence thresholds; priority-protected upserts (human › rule › AI), DB-trigger audit log, review form that turns decisions into rules; 5 workflows generated from Python with JavaScript Code nodes.
- Proof: 562 packages normalized into 298 products; 82% classified without an LLM call; 0 AI calls and 0.3 s on a repeat run; one-command deploy.

Lead pipeline: intake → rules → LLM → CRM

Oct 2026

github.com/kostyantyn94/lead-pipeline-n8n · n8n · PostgreSQL 17 · HubSpot API v3 · OpenAI-compatible LLM · Docker Compose · node:test

- Solves: inbound leads from forms and ads are validated, deduplicated, enriched, qualified and pushed into HubSpot without manual work; sales only sees the doubtful cases in a review form, and every human decision becomes a rule.
- How: 6 n8n workflows; rules as DB rows; LLM only for the rest (schema-validated JSON, confidence thresholds, retries, fallback to review); HubSpot v3 sync with an offline mock; error handler; dashboard; workflows generated from code, logic unit-tested outside n8n.
- Proof: 55 sample leads, 67% decided without the model, 0 LLM and 0 CRM calls on a repeat run; LLM and CRM outages tested with a chaos switch.

EARLIER EXPERIENCE

Frontend Engineer · VISO — TypeScript, React, Next.js — Mar 2025 – Jun 2025

JavaScript Engineer · Synchronous Health — React, Next.js, Node.js — Dec 2024 – Feb 2025

IT Support Specialist · Synchronous Health — support, Power BI — Jan 2023 – Nov 2024

JavaScript Trainee · DevIT Group — Shopify, Node.js, Remix — May 2024 – Sep 2024

IT Support Specialist (German) · Paymash — ticketing in German — Feb 2022 – Nov 2022
